Archit

Sr. Backend Software Engineer

5.0y exp · 3.7y IC · 1.3y Lead · 3 Careerspan screens

📋 CANDIDATE BOTTOM LINE

Through three Careerspan screens, we validated behavioral patterns the resume couldn't show—Zero-To-One Platform Launcher and Peak-Traffic System Architect—confirming this senior backend engineer can add immediate value to Addepar's alternatives data workflows. Beyond credentials, our screening surfaced a manageable ramp on serverless/DynamoDB and investment-domain specifics.

🤔 Proceed with Caution — 75/100

📊 **SKILLS SIGNAL** Screen-verified **58%** Resume-only **36%**

↔ Priority Alignment Matrix

System Architecture & Scalability
Strong fit
Demonstrated ability to architect and maintain solutions, plus experience defining technical stack

Technical Leadership
Strong fit
Track record leading project initiatives and making stack decisions

Python Programming
Gap
Core backend skill explicitly flagged as weak - critical for most backend roles

Database & Search Infrastructure
Gap
Both DynamoDB and OpenSearch/Elasticsearch listed as gaps - may struggle with data layer work

Security Compliance
Verify in meeting
Listed as weak but may have adjacent experience through system monitoring work

Cross-functional Collaboration
Strong fit
Experience collaborating with ML engineers suggests effective technical communication

🎯 Culture Alignment Signals

✓ STRONG FIT
- Ownership Mentality
- Collaborative Mindset
- Drive for Innovation

✗ CONCERNS
None identified

? VERIFY
- Client Centricity
- Learning Orientation

🔍 What Our Screening Validated

Zero-To-One Platform Launcher

"Founded the Assignment platform, building initial PoC and scaling to full product"

— While growing and mentoring a team of 8 engineers at Embibe's education platform

Peak-Traffic System Architect

"Led design of Orders and Payments platforms across 12+ microservices"

— During Quince's mission-critical off-Shopify migration to handle $15M/day revenue and 5× Black Friday traffic spikes

Zero-Downtime Migration Executor

"Overhauled database schemas and implemented smooth migration with zero downtime"

— While redesigning Embibe's user timeline backend to remove scaling bottlenecks serving 10M+ learners

Human-In-Loop Automation Designer

"Designed LLM-powered fraud pipeline delivering investigation summaries to Slack for review"

— At Quince, operationalizing RAG-based ML to combine order data, payment signals, and historical fraud patterns

❓ Questions That Remain

Architecture Decision-Making

"Walk me through a system architecture you designed that had to evolve significantly over time. What were the original constraints, what changed, and how did you adapt the architecture while maintaining stability?"

ML Engineering Collaboration

"Describe a project where you had to bridge the gap between ML model requirements and production infrastructure. What tensions emerged between the ML team's needs and operational realities, and how did you navigate them?"

Security Compliance

"What security considerations do you typically build into your architecture from the start? Can you give an example where you had to retrofit security controls into an existing system?"

Python Depth

"What's your approach to structuring Python codebases for maintainability at scale? Walk me through how you've handled things like dependency management, testing patterns, or performance optimization in Python."
