Hardik Khichi

AI Engineer

4.7y exp · 3.5y IC · 1.2y Lead · 4 Careerspan screens

📋 CANDIDATE BOTTOM LINE

This zero-to-one ML architect is a strong fit based on my screens because of demonstrated success shipping platforms from whiteboard to production.

👍 Take This Meeting — 89/100

📊 **SKILLS SIGNAL** Screen-verified **76%** Resume-only **20%**

🔍 What the Resume Can't Tell You — Behavioral signals from Careerspan screens

Zero-To-One Platform Architect

"Led ML SaaS platform from whiteboard to production"

— At Keysight, as founding engineer building from scratch to serve 200-300 daily users including Apple, Samsung, Volkswagen with $1M budget

Reliability-First Systems Engineer

"Built instant rollback and automated MLOps pipelines"

— Scaling platform for global enterprise clients including compliance provisioning and stress testing for 6G and autonomous vehicle workloads

User-Driven Iteration Engine

"Triaged feedback to shape roadmap and core features"

— Managing significant volumes of post-rollout feedback, personally prioritizing improvements that led to internal teams preferring this over legacy too

Velocity-Optimizing Automator

"Cut model-to-production time from hours to minutes"

— While owning full MLOps lifecycle at Keysight and building database automation frameworks at American Express handling 70k+ daily jobs

❓ Questions That Matter — Key areas to probe in the interview

End-to-End Solution Delivery

"Tell me about a time you owned a feature or system from initial concept through to production. Walk me through the lifecycle: how did you break down the problem, what tradeoffs did you consider, and how did you measure its success post-launch? What would you do differently?"

Confirms: end-to-end delivery depth, problem decomposition, ownership mindset, learning orientation

AI Prototyping to Production

"Describe a project where you took an AI/ML concept from a prototype to a production-grade system. What made it production-ready? How did you ensure reliability at scale, and what guardrails or monitoring did you put in place?"

Confirms: production AI experience, reliability practices, operational maturity

Vector Search Techniques

"What's your practical experience with vector databases and embedding-based retrieval? Have you worked with systems like FAISS, Pinecone, Weaviate, or similar? If you were building a semantic search feature today, how would you approach it?"

Verifies: vector search knowledge depth, hands-on vs. theoretical exposure

SOC 2 Compliance

"SOC 2 came up in your background. Have you worked in a SOC 2 compliant environment or contributed to an audit? What did that look like in practice—were you involved in evidence collection, policy adherence, or security controls?"

Verifies: actual SOC 2 exposure vs. passing familiarity, security/compliance mindset

↔ Your Priorities → Fit — How candidate maps to role requirements

Deliver end-to-end solutions
Strong fit
Demonstrated strength in owning full feature lifecycle from design to deployment

Ensure feature reliability
Strong fit
Proven track record in production stability and operational excellence

Prototype and productionize AI
Strong fit
Core competency in transitioning AI experiments to production systems

Vector Search Techniques
Gap
No demonstrated experience with embeddings, ANN algorithms, or semantic retrieval systems

SOC 2 Compliance
More signal needed
Unclear exposure to security frameworks, audit requirements, or compliance engineering

User Feedback Integration
Verify in meeting
Claimed strength but probe depth: instrumentation design, metric selection, feedback loops
