📋 CANDIDATE BOTTOM LINE

Strong senior backend hire with standout distributed systems and ML-adjacent integration experience who can add immediate value to Addepar's alternatives data workflows, with a manageable ramp on serverless/DynamoDB and investment-domain specifics.

🔍 What the Resume Can't Tell You — Behavioral signals from interviews

❓ Questions That Matter

Architect and maintain solutions
"Tell me about a system you architected that required significant evolution over time. What design decisions did you make upfront that proved valuable, and what would you change knowing what you know now?"

Collaborate with ML engineers
"Describe a project where you had to bridge the gap between ML model requirements and production infrastructure. What tensions emerged, and how did you resolve them?"

Security Compliance
"What's your experience implementing security controls in data pipelines or ML systems? Walk me through how you've handled sensitive data in a recent project."

Python Programming
"When you're writing Python for production data systems, what patterns or practices do you follow to ensure code quality and maintainability? Can you give a specific example?"

DynamoDB
"Have you worked with DynamoDB or similar NoSQL databases? If so, how did you approach data modeling and access pattern design?"

↔ Your Priorities → Fit

Architecture & Systems Design

Strong fit

Demonstrated ability to architect and maintain solutions, define technical stack

Cross-functional ML Collaboration

Strong fit

Experience collaborating with ML engineers on integrated solutions

Technical Leadership

Strong fit

Track record leading project initiatives and making stack decisions

Python Programming Proficiency

Gap

Listed as weak area - critical skill for most ML-adjacent technical roles

Security & Compliance Ownership

Verify in meeting

Flagged as gap but may have exposure through architecture work - probe depth

Database Technologies (DynamoDB, OpenSearch)

More signal needed

Specific tech gaps but strong systems background may enable quick ramp

🎯 Culture Alignment Signals

✓ MATCH

Architect and maintain solutions
Story-verified

Lead project initiatives
Story-verified

Define technical stack
Story-verified

Monitor System Performance
Story-verified

Collaborate with product teams
Story-verified

✗ MISMATCH

Ensure Security Compliance
