Archit

Sr. Backend Software Engineer

5.0y exp · 3.7y IC · 1.3y Lead · 3 Careerspan screens

📋 CANDIDATE BOTTOM LINE

This zero-to-one platform builder is a conditional fit based on my screens because founding backend products while operationalizing LLM fraud pipelines demonstrates rare architect-operator range.

🤔 Proceed with Caution — 75/100

📊 **SKILLS SIGNAL** Screen-verified **58%** Resume-only **36%**

🔍 What the Resume Can't Tell You — Behavioral signals from Careerspan screens

Zero-To-One Platform Builder

"Founded the Assignment platform, building initial PoC and scaling to full product"

— While growing and mentoring a team of 8 engineers at Embibe's education platform serving 10M+ learners

Peak-Load Infrastructure Architect

"Drove EKS replicas, RDS sizing, cache optimizations, and SOPs for 5× traffic spikes"

— During Quince's Black Friday/Cyber Monday scaling to support $15M daily revenue and 100k+ orders

ML-To-Operations Pipeline Builder

"Designed LLM-powered fraud review pipeline using RAG to generate investigation reports"

— At Quince, creating human-in-the-loop automation that delivered summaries to Slack for operational action

Zero-Downtime Migration Executor

"Overhauled database schemas and executed smooth migration with zero downtime"

— Leading critical redesign of Embibe's user timeline backend to remove scaling bottlenecks

❓ Questions That Matter — Key areas to probe in the interview

Solution Architecture

"Tell me about a complex system you architected from scratch. What tradeoffs did you navigate, and how has the solution evolved as requirements changed?"

Cross-functional ML Collaboration

"Describe a project where you worked closely with ML engineers to productionize a model. What infrastructure challenges emerged, and how did you resolve differing priorities between engineering and ML teams?"

Security Compliance

"Walk me through how you've implemented security controls in a production system—things like access management, encryption, or compliance requirements. What frameworks or standards have you worked with?"

Python Programming

"What's the most technically demanding Python code you've written? Tell me about a time you had to optimize performance or debug a tricky issue in Python."

↔ Your Priorities → Fit — How candidate maps to role requirements

System Architecture & Design

Strong fit

Clear strength in architecting solutions and defining technical stack aligns with core backend responsibilities

Cross-functional Collaboration

Strong fit

Experience collaborating with ML engineers suggests ability to work across technical boundaries

Technical Leadership

Verify in meeting

Led project initiatives, but unclear if this translates to mentoring junior engineers or driving architectural decisions at scale

Core Programming (Python)

Gap

Python flagged as weak area - critical gap for most backend roles; needs assessment of actual proficiency vs. preference

Data Infrastructure (DynamoDB/OpenSearch)

Gap

Both explicitly listed as gaps; may limit effectiveness in data-intensive backend work without ramp-up time

Security & Compliance

More signal needed

Listed as weak but unclear if gap is in security architecture vs. compliance documentation - high stakes for backend systems
