Archit

Sr. Backend Software Engineer

5.0y exp · 3.7y IC · 1.3y Lead · 3 Careerspan screens

📋 CANDIDATE BOTTOM LINE

Strong senior backend hire with standout distributed systems and ML-adjacent integration experience who can add immediate value to Addepar's alternatives data workflows, with a manageable ramp on serverless/DynamoDB and investment-domain specifics.

🔍 What the Resume Can't Tell You — Behavioral signals from Careerspan screens

Zero-To-One Product Founder

"Founded platform, building initial PoC and scaling to full product"

— Creating Embibe's Assignment system while growing and mentoring a team of 8 engineers

High-Stakes Migration Executor

"Overhauled database schemas and executed zero-downtime migration"

— Redesigning Embibe's user timeline backend tracking engagement for 10M+ learners

Human-In-The-Loop Automation Builder

"Automatically delivered summaries to Slack for human review and action"

— Operating Quince's LLM-powered fraud review pipeline across 100k+ daily orders

Peak-Resilient Systems Architect

"Led infrastructure upgrades and SOPs for 5× traffic spikes"

— Scaling Quince's platforms for Black Friday/Cyber Monday supporting $15M daily revenue

❓ Questions That Matter — Key areas to probe in the interview

Architect and maintain solutions

"Walk me through a system you architected from the ground up. What were the key trade-offs you navigated, and how has the system evolved since initial deployment?"

Collaborate with ML engineers

"Describe a project where you worked closely with ML engineers to productionize a model. What infrastructure decisions did you make to support their workflow, and what friction points did you have to resolve?"

Security Compliance

"Tell me about a time you had to implement or enforce security compliance requirements in a system you owned. What standards were involved, and how did you balance security with developer velocity?"

Python Programming

"What's your current Python development workflow look like? Walk me through how you'd structure a new Python service, including testing, dependency management, and code organization choices."

↔ Your Priorities → Fit — How candidate maps to role requirements

System Architecture & Design

Strong fit

Direct experience architecting and maintaining solutions; can define technical stack

Python Programming

Gap

Listed as weak area; core requirement for most backend roles needs validation

Technical Leadership

Strong fit

Proven ability to lead project initiatives and make stack decisions

Database & Data Layer (DynamoDB)

More signal needed

DynamoDB flagged as gap; unclear if transferable from other DB experience

Security & Compliance

Gap

Security compliance explicitly identified as weak area; critical for backend systems

Cross-functional Collaboration

Verify in meeting

ML engineer collaboration noted; probe depth of technical integration work
